S. C. Members Defeat Cabinet on The Budget

Wanted Provision for The S C Principals

On different occasions during the past 18 months we have heard over the radio on Sunday's very harsh criticism from Premier Aberhart about the complaints from the press, the banks, the financial barons and the "big shots" and how they were making it difficult for him and his government to fulfill the promises made prior to taking office.

During the past week, however, the complaints are coming from a different source, and are much along the same line as were made by the press of the province.

This time the complaints and suggestions are coming from a large percentage of Social Credit members of the legislature and, strange as it is, the criticism coming from the S C members is much more severe and personal than any that came from the press.

There is great admiration from the public for the stand taken by the Social Credit members who are branded as insurgents.

There is no doubt it took considerable back bone for those S C members who questioned the actions of a leader like Mr. Aberhart, who had picked his candidates.

The split in the party was over the budget presented by the new provincial treasurer which made no provision for the introduction of social credit money. The motion to alter the budget debate was introduced by S C backbenchers so that changes could be made in it. When the motion was voted the government was defeated by 27 to 25. Dr. Robinson our local member for Empress, voted with the government. A W. Lamont, of Cypress and J. Harston, of Thor, voted against with the others.

St. Ambrose A. Y. P. Had Successful Night

Hall Was Well Filled For The Occasion

Easter Monday dance put on in Cliff Hall by St. Ambrose A. Y. P. drew a record crowd and the program throughout was thoroughly enjoyed.

The program opened with a bridge and whist drive and the tables were well filled. The bridge winners were Mrs. H. Lappard, Mrs. Shaw, Mrs. Hurst, Mrs. Hicks and Mrs. Bellantyne. For Whist, Mrs. Cox and Mr. Sanderson won first prize and Mr. Rose, the consolation.

After cards the hall was filled to capacity for the dance, which was well conducted and furnished great pleasure for young and old. Mr. and Mrs. N. Larson won the prize for the old time dance. Miss Jean Patterson and Mr. M. Collard won the elimination dance, and Mr. and Mrs. N. Willis the spot dance.

Dainty refreshments were served at midnight.

Promising Prospects For Boles' Concert

Lengthy and Amusing Program Already Assured

According to reports circulating already been a number of local artists entered for the Boles' Amateur Concert to be held in the Little Theatre here next Thursday, April 8th, and there is no doubt that the program will be well worth seeing. Entries already made are of a variety of all kinds and are assured of a lengthy program made up of fun, frolic, comedy and famous folk songs.

Tickets are now in circulation and should be secured at once to be assured of a seat.

This entertainment is under the auspices of the local League and the proceeds will be used for a worthy purpose.

Several prizes will be awarded for different classes of items. Any wishing to take part should make their entries at once.

Canadian Wheat Surplus Disappearing

Stocks Today Are at Lowest Level in Decade

Ever increasing European demand for wheat, with available supplies disappearing at a rapid rate, witnessed in years, continuing the basic cause of an inadequate Canadian "bull" market as has been seen in years.

Emphasizing the fact Canada's stocks just now are at the lowest level in nearly a decade, wheat futures prices skyrocketed 9 1/2 to 5 1/2 cents a bushel on the Winnipeg grain exchange this week. Always a wide mover, wheat shot up 15 1/2 to 11 1/2 cents, net, in sympathy.

Aberhart Government is Ready to Quit Says Albertan

Caucus With Cabinet and Insurgents Last till Early Morning Without Solution—S. C. Member Calls it a Regular Dog Fight.

According to latest radio reports from Edmonton today the S C Caucus called for last night lasted till 6 o'clock this morning and broke up with no satisfactory solution of the serious situation agreed upon between the cabinet and the insurgents.

According to the Albertan it is morning, "the cabinet is reported to have informed the caucus that it stood ready to resign if sufficient support was not assured to carry on, and if we unanimity could not be obtained among backbenchers."

One member said the caucus had been a regular dog fight. "Though no announcement

has been made," say the Albertan, "it appears certain, following the caucus, that the breach between insurgents and loyalists forces was far from being healed."

"There is strong rumor," says the Albertan, "circulating in the legislative corridors, that the insurgent group would on the third reading of the money bill and thus force a non-confidence vote in the government."

"It is quite evident from latest reports that the insurgents are determined to force the cabinet to at least attempt to fulfill their pre-election promises and it appears they are going to give them 60 days in which to do so."

Mrs. E. Vegetat and children who have been visiting Mr. and Mrs. O. Vegetat for the past month left for their home in Tuleen Alberta last Friday.

Special Easter services were held in town churches and, as were well attended for the occasion. Chorus rendered appropriate music.

Owing to the improvement in shipping fuel for shipment to the British market there has been a large increase in shipments during the week ending Mar. 27. Twenty cars were shipped from Canada to the British market during the week ending Mar. 13.

Promising Plans For Coronation Celebration Here

Finance Com Anxious to Get Donations in Early

Plans for the carrying out of the Coronation program here were most promisingly reported by the several committees which met last evening. Good progress has been made so far but nothing definite as to prices and necessary expenses can be completed until the finance committee has a complete report from citizens and organizations which are expected to contribute to the coronation fund. It is hoped that this will be completed as soon as possible.

Plans are well under way for a big parade which is expected to be represented by industries, organizations, Boy Scouts, Militia, Band, School pupils, floats, decorated cars and citizens generally. It is also expected that business places and private homes will be decorated for the occasion.

Medals have been ordered for school children and if adults or organizations wish to secure these they may get them at cost but the orders must be given to the secretary, F. V. Britt, at once.

The School staff is arranging for an appropriate program by the children on the school grounds. Other arrangements will be announced later.

The following is the list of donation so far:

Town of Redcliff	\$100.00
Dom Glass Co.	40.00
Brick & Coal Co.	10.00
Power & Fuel Co.	10.00
High School Pupils	5.00
Dr. A. E. Ward	1.00
Mr. C. G. Hochholz	1.00
Mr. Wm. Hill	1.00
Mrs. E. Kitchen	1.00
Mr. A. Mackell	1.00
Mr. J. R. MacKenzie	1.00
Mrs. J. R. MacKenzie	1.00
Mr. R. Cann	1.00
Mr. H. Johnson	1.00
Mr. F. V. Britt	1.00
Mrs. A. E. Ward	1.00
Rev. H. Ellison	1.00
Mr. K. Johnson	1.00

\$178.00

Joe Ellison spent the Easter holiday here with his parents.

Wheat prices took another jump Saturday and set a new seasonal and seven-year high.

Mr. Sid Worts, of the Imperial Bank Staff, at Piapot spent the Easter holiday here with his parents Mr. and Mrs. G. H. Worts.

Meeting Held Here To Discuss Co-operative Store

Speaker From Calgary Outlined The Necessary Plans

There was a fairly good attendance at the Oddfellows' hall last Tuesday evening when a public meeting was held for the purpose of discussing the proposition of organizing a co-operative store in Redcliff.

Mr. A. Williamson, Manager of a co-operative store in Calgary, was the speaker of the evening in which he outlined the principals upon which co-operative stores were based and the plans which should be laid out for the success of their operations.

There was considerable interest shown in the movement by those present and the several questions asked were most satisfactorily answered.

The speaker stressed the point of getting the proposition in a sound basis before opening and the management on strictly business lines.

At the close of the address a committee was appointed to investigate the possible prospects and to report at another meeting in the near future.

Impressive Service At Gordon Memorial

Choir Rendered Special Music For The Occasion

Very appropriate Easter Services were held in Gordon Memorial Church last Sunday. A very large attendance was present in the morning when the junior choir rendered two very impressive Easter Anthems and Mr. Ellison gave a very impressive address on "Coming to Terms on Immortality." This was followed by Adult baptism reception of 16 new members and Holy Communion.

A good congregation in the evening entered reverently into the short Easter Worship and the senior choir rendered a cantata: "The Gospel of Easter" which was a credit to the leader the organist and members of the choir.

NEW INTEREST BILL BEFORE LEGISLATURE

New legislation to cut interest rates on Alberta securities replacing an act which the courts declared ultra vires, was introduced in the legislature shortly before adjournment on Thursday night.

Three acts were submitted to the assembly and given first readings, all dealing with interest reduction on provincial securities or debentures guaranteed by the province.

Mild weather is on again and it makes everything feel and look like spring.

Returns tabled in House of Commons from the Dept. of Trade and Commerce estimated the population of Canada 11,100,000. The national increase of births over deaths was 128,963 a year.

Showdown on Union Issue Near In Steel Industry

Philip Murray

Benjamin Fairlie

Industry employs 550,000 men

Scouring wage increases in steel workers were announced by the union of the industry almost simultaneously with the meeting of Benjamin Fairlie, president of the United States Steel Corporation, and Philip Murray, representing the John L. Lewis Committee for Industrial Unionism. Their conference, held in Pittsburgh, came as a surprise to the steel industry and was attended by representatives of the C.I.O. by the United States Steel Corporation's chief operating subsidiary, which employs 120,000 men. In addition to wage increases granted, many of the steel companies established a 40-hour week. It is expected that C.I.O., now claiming 120,000 members in the steel industry, will hold a convention in April and demand a general conference of the steel heads.

Come From All Countries

Canada Imports Millions Of Nuts

With Oil And By Frederick

Consider the humble coconut—humble, indeed, but imported into Canada to the extent of more than 15,000,000 nuts per year; one nut for every man, woman and child, and some over. And that does not take into account the desiccated coconut, over a million and a third pounds of it; or the coconut oil for refining, about half a million gallons; or the coconut and palm oil for making soap—three and three-quarter million gallons of that. The original coconut was the "coconut" and coconut was spelled "coconut" in some of the British customs houses to distinguish the tree. Canada gets the complete nut, one year and another, from British Guiana, British Honduras, Jamaica, Trinidad, Dutch East Indies and the United States. In the desiccated form, the nut comes chiefly from Ceylon.

That the coconut is a humble creature, but it is at least roots high. Not so the peanut, which grows underground with the worms and the dogs. Some years Canada imports nearly 40,000,000 pounds of this little underground gangster, besides peanut oil and peanut butter; over \$2,000,000 worth of the oil alone. The peanuts come from East and South Africa, Rhodesia, British India, the West Indies, Hong Kong, Australia, China, Japan, Mexico, the Dutch East Indies and the United States. It reads like a lesson in geography.

These are only two of the nuts that come to Canada. Of desiccated almonds, there are sometimes a year or two pounds imported in a year; almonds from Hong Kong, Palestine, China, France, Greece, Italy, Spain, Syria and the United States. The almonds and hazel nuts (over a million pounds) have come chiefly from Italy. The Brazil nuts (a million and a third pounds) enter chiefly from the United Kingdom, the United States and Brazil. Many products coming from Britain and the States do not originate there. The almonds are shelled nuts; almonds over a million and a half pounds; peanuts, a third of a million pounds; walnuts, nearly five million pounds in addition to the unshelled which amount to another million and a quarter pounds.

But? Canada imports between two and three-quarter and four million dollars worth per year, besides their oils and other by-products. Over a million dollars goes to China alone, chiefly for peanuts and shelled walnuts. The man who despises a peanut is despising a little fellow who is in business in a big way.

Fear Hopper Plague

Information Said To Be In Saskatchewan And Alberta

The department of agriculture declared Saskatchewan is threatened with a grasshopper plague far more serious than that of last year and the situation in Alberta is also serious, at least as serious as any in the last five years.

The department, compiling results of surveys undertaken last fall by officers of the entomological branch on grasshopper egg deposits in the prairie provinces, says that the situation in Manitoba would cause serious infection. It estimated the total area in which at least one case of infection would occur at about 53,000,000 acres, 9,500,000 more than last year. Organized control of the plague will be necessary in about 3,600,000 acres of Saskatchewan and about 4,000,000 acres of Alberta. Need for organized control was not expressed in Manitoba, the department said, although there was evidence some local control might be needed on individual farms and in an area of about 45,000 acres in the northwest.

Chinese Woman Diplomat

Talented Lady Is Master Of Several Languages

China's first woman diplomat—Miss Anna A. L. Huang, younger sister of China's well-known poet, Huang Chin—is en route to England, ready to assume her duties as third secretary of the Chinese Embassy at London. Miss Huang has occupied a confidential position in the Ministry of Foreign Affairs for two years. She was educated at the American-British Yenching University in Peking, and speaks Chinese, English, French and German fluently.

Hot Sulphur Spring Creek in Banff, Alberta, has never been frasier since its discovery in 1883, although it is a mile above sea level and nearly lacks fresh acidity.

A few drops of turpentine added to tepid water is excellent for washing glassware and china.

Bananas were a popular food of the ancient Egyptians.

Indians In Canada

Per Capita Wealth Is Estimated At More Than \$500

The number of Indians in Canada has varied considerably during the last thirty years. During the period from 1907 to 1927 it declined from 110,000 to 104,000, but since then it has been increasing and, according to the last departmental census taken in 1934, has now reached a total of 113,000.

Like those of other races, Indian problems are determined largely by the climatic and physical features of the areas in which they live. In southern Ontario, southern Quebec, and parts of the Maritime Provinces the Indians are engaged largely in agriculture, and some of them find employment in nearby industrial centres. Another group occupies the great hinterland comprising the northern parts of the province from the north shore of the St. Lawrence River to the Mackenzie Valley and Yukon Territory. These people are dependent mainly on hunting and trapping for their living.

A third group is found in the Great Plains region, and the foothills country of Alberta, where their lands are suitable for agriculture and stock-raising. In 1870, when the buffalo herds were virtually wiped out, these Indians had to turn to farming and ranching, and within two generations a large number of them have developed into prosperous, self-sufficient farmers. Still another group of Indians inhabit the northwestern coast of British Columbia. These people had developed a highly organized culture before the appearance of the white man. They are fisher-folk, trained to the sea, and for many years have been prominent in the fishing industry.

Indians in Canada are the wards of the Canadian Government, which has set aside for them some 2,000 reserves, varying in size from a few acres to 500 square miles, and comprising an area of 5,170,000 acres of which 220,000 are under cultivation. The total value of the real and personal property of the Indians of Canada is estimated at over \$11,000,000, or more than \$600 per capita. Lands and minerals have trust funds derived from the sale and lease of lands and minerals rights and the sale of timber. These funds, which amount to almost \$14,000,000, are administered by the Government for the benefit of the Indians concerned. Almost two million dollars a year is spent on the education of Indian children. There are 79 residential schools for Indian children in the Dominion with a combined enrolment of over 18,000 children.

An Old Missive

Letter Of 17 Years Ago Is Discovered By Tailor

Tucked away in a pocket of an overcoat 17 years ago, a letter addressed to Miles Schnarr, of Longbeach, N.Y., has been found and read for the first time. The letter, which was found deep in an inside pocket by a tailor who was repairing the garment, bore the popular name for this fragile-looking shrub which has such an apparent fragility for centuries. It is called bayberry. The letter was discovered in 1920.

The letter was written by a man named Miles Schnarr, of Longbeach, N.Y., and related details of a hailstorm at Longbeach during the summer of 1910. The hail was as large as small hen's eggs, it was said, and windows were broken and crops destroyed.

Mr. Schnarr said in her letter 17 years ago that conditions were extremely hard for everybody, following the end of the war, and that at that time for \$14 a barrel and sugar for 20 cents a pound.

Tonic For Tired Steel

Use Of Nickel As An Alloy In Steel Reduces Fatigue

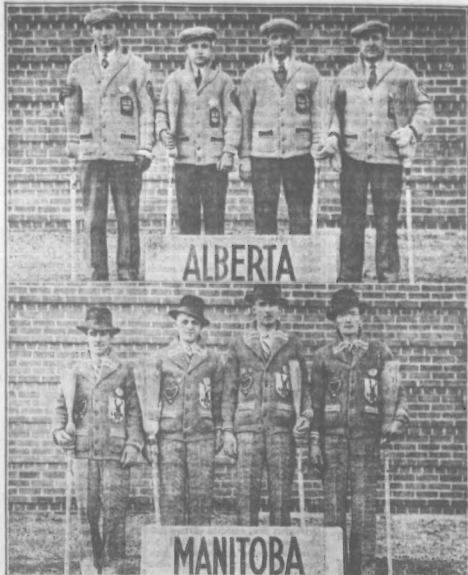

"Fatigue" is the word used by metallurgists to describe the weakening of steel for other metals when they are subjected to frequently repeated shocks for a considerable length of time. Steel, they explain, tends to get tired and, after a while, may break under a shock which it could normally withstand easily. The use of nickel as an alloy in steel prevents or reduces this kind of fatigue. Hence nickel-steel in locomotive axles makes travel by rail safer.—White Metal News Letter.

Record Of Some Kind

James O. Cox, farmer and rider, Stafford, Mo., claims a local endurance record for a pair of pants—his only pair. The pants are of a three-piece ensemble purchased in Tacoma, Washington, in 1906 for \$25. Cox never has bought another suit since.

Not one of the ordinary tests used by laymen to detect poisonous mushrooms is absolutely safe. The only sure method is to know the various species by sight.

ALBERTA AND MANITOBA IN FINALS OF CURLING TROPHY

The Canadian Curling Championships, held this year in Toronto, was one of the keenest ever held in the Dominion. The Montreal River Taters, emblematic of the Canadian risk curling championship, was particularly interesting. Alberta won the championship when Cliff Macdonald's Edmonton rink whipped Jimmy Welsh and his Manitoba champions 19-1 in a sudden-death playoff. The game was played before one of the largest galleries ever to assemble at the political Granite club.

Ancient Trees

Box Huckleberry Believed To Be 12,000 Years Old

The mighty redwood of California, towering hundreds of feet in the air, and the cypress of Mexico, with its immense girth, may be forced to pass the honor of being the oldest living thing in the world on a little ten-inch shrub growing in Pennsylvania.

The oldest redwoods in California have been reaching slowly skyward for the last 60 centuries and the most ancient cypress in Mexico has been extending its now gigantic girth for a period estimated at between 5,000 and 10,000 years.

But the little box huckleberry, 30 miles north of Harrisburg on Lobsenz, has been engaged in the business of growing to a height of less than a foot for the last 12,000 years. At least, that is the estimate of botanists. A more dignified, if less popular name for this fragile-looking shrub which has such an apparent fragility for centuries, is bayberry. The letter was discovered in 1920.

The person who agrees with other people is a yelman. The person who doesn't is a cross-grained grovch.

Passing Of An Old Theatre

London Playhouse Used Same Safety Curtain For 33 Years

The old Prince of Wales Theatre, said to be the first London theatre to have a telephone for seat booking, has passed from the entertainment world.

At a "farewell" performance recently, the same safety curtain was used which was installed for the opening performance. This was claimed to be the first time curtain to be installed in the West, and had been in constant use for 33 years.

A new theatre twice as large as the old building is to be erected on the site.—Christian Science Monitor.

They All Be It

The Ontario Minister of Highways, Hon. T. B. McQueen, made one very appropriate observation at a meeting of the Motor League: "People who bring their hands when they came upon an accident have probably broken the speed laws themselves in getting there." And they often do the same thing in following the fire trucks in the city.

A flannel cloth dipped in oatmeal makes a good cleaner for painted woodwork.

Intellectual Giants

Twins Show Child Genius Live Up To Future Predicted

Psychologists have the answer to the question of what becomes of child geniuses. Children who are intellectual giants mature into even more learned giants.

That this is true can be proved scientifically for the first time as the result of tests recently completed by two psychologists at Columbia University, Dr. Irving Loring and Dr. Letta St. Hollingworth.

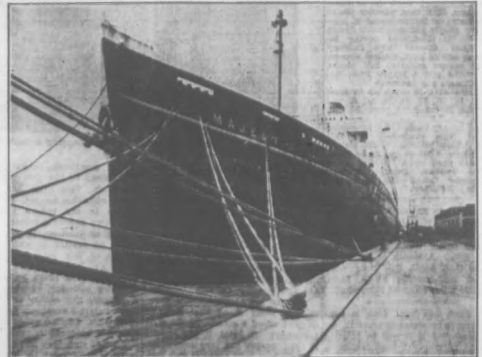

By retesting the intelligence of more than half of a group of outstanding children originally tested 15 years ago, the psychologists found that not one failed to "live up to the brilliant future predicted upon the result of the first examination."

Studying the stars at Greenwich Observatory costs \$20,000 a year, where a staff of thirty men are constantly employed. This work has gone on there for 360 years.

"If you are good, Jackie, I'll give you this rice bright new penny." "Son! 'Haven't you got a dirty old dime, instead?"

Nicaragua's 1936 coffee crop weighed over \$61,000,000 pounds.

FAMOUS LINER RECOVERS TRAINING SHIP

The famous liner "Mastet", which for years was the pride of the Atlantic shipping lanes, will hereafter be known as M.M.S. Calcedonia, and will be used as a training ship. She is shown above at the quayside at Boston, where she has been undergoing training for the Royal Navy and 500 anti-aircraft apprentices. When she is the largest vessel in the mercantile marine she completed over 300 Atlantic round trips.

New Engineering Project

Roof Poles Are Latest Idea In Air Conditioning

An engineering project for a new type of house, that roofed, its top a slating rink in winter to keep the heat out and a sliding pool in summer to keep it cool, has been launched in New York.

Franklin, it is now explained, are a new accomplishment in air conditioning. With aid of new materials it was said they promise to bring an architectural revolution within reach of the average man. The project was announced by Lieut.-Col. W. G. Danielson, Washington, chairman of the committee on research of the American Society of Heating and Ventilating Engineers. He said the building at army posts and airports.

Under water, he said, roofs last longer. They leak less. In summer water cools them, like the wet cloth around a water jug. In winter water or ice are both good insulation. Flat roofs cost less.

"Few persons," he added, "realize that the sloping roof came into use because of expansion and contraction of roofing materials." It is no longer necessary, with new materials. "The peculiar feature," Col. Danielson went on, "is that the best roofing materials have a much longer life when continuously under water than when exposed to direct sunlight."

The announcement was inspired by tests of two roof pools recently built. One is the Herby Chubb's, Commercial's office at Hershey, Pa.; the other a department store in Milwaukee. The store moved, said Col. Danielson, 25 per cent of the cost of air conditioning equipment, and 20 per cent of the electricity otherwise needed.

"It seems likely," said the colonel, "that more and more of the houses of the future will adopt this practice, with flat roofs containing pools of water two or three inches in depth. The committee is launching a broad research program to study past mistakes. Water insulation should bring nearer the day when air conditioning becomes a reality within the reach of the average family."

Checking Up On Pilots

Mechanical Eye Will Show How Efficient They Are

The United States Commerce Bureau officials reported they soon will begin experiments with one of the newest airline safety devices—a "mechanical eye" which will secretly record how pilots handle their planes. The instrument, known as a "radar" is a cylindrical, metal vessel grafted fitted into planes to record speed, direction, altitude and other data during flights.

By studying the record, officials said, airline supervisors can tell whether pilots are doing their jobs as well as they should. The instrument has been installed on all transport planes.

Another study planned by the bureau when projected expansion of its research division is effected involves the possibility of catapulting transport planes into the air to make take-off tests.

Diet Knowledge

Development Of Science Showing The Relation Of Foods To Life

Average span of life would be increased from five to seven years if modern science could apply everything presently known about diet to society in general. Dr. Morris Fishbein, editor of the American Medical Journal, said in an interview at Montreal, Dr. Fishbein said that after thousands of years of digestive progress it had been only within the past 50 years had been started to develop a science showing relation of foods to life.

They Would Know

"In connection with both the Moody and Bankey Centenary and the new controversy about domestic service," writes a correspondent of the London Observer, "you will recall a story of the evangelist (D. L. Moody)? At one of his meetings a lady asked him how she was to know if she was 'converted' or not. 'Ask your servants,' said Moody."

It requires only about one and one-third seconds for the light of the moon to reach the earth.

There are 270 different languages spoken on the African continent.
